

My name is Nicolas Chrysanthou. I am 14 years old and I am a third gymnasium class student at Omodos School in Cyprus.

I decided to learn more about recycling and reusing because at home we are trying to implement some eco-friendly practices and I needed some ideas about recycling and especially reusing stuff that others may consider as trash.

About the interactive activity in the classroom, my only comment is that I really liked it! It was fun working all together. If I could change something that would be to have more time to be prepared.
