Class 2b

5th Gymnasium, Zagreb, Croatia

Group topic: Reuse

Report on e-learning and flipped classroom feedback (Spring 2021)

E-learning in Loop Erasmus was a great experience and opportunity to learn something new about environmental problems and their modern solutions. Some parts of those educational videos were a little bit difficult to comprehend because of strong language terms.

The Ted talks were a really fun experience and the atmosphere was really easy-going. Students were really creative with their topics and the way of presenting them.

In conclusion, we are very happy and excited to be a part of the project.

These are some questions that we prepared for discussing our topics in class:

1. Which materials are most environmentally friendly?
2. How can the value of materials increase?
3. How can lifespan of product be extended?
4. How can we reduce the amount of waste that's being made?
5. What is happening to old devices that are not working anymore?
6. What are the consequences of CO₂ emissions into the ocean?
