# CIRCULAR ECONOMY

CREATED BY:

STAMILLA VITTORIA MARIA, SFERRAZZA KAROLA MARIA AND AURORA PASSAVANTI

# THE GENERAL EXPERIENCE

- Taking part in the Erasmus program was an amazing opportunity to learn about important issues that affect us all by trying to raise awareness among all the people around us. Thanks to this work, we gathered a new knowledge on these issues that maybe we were not aware before, although we might have heard all about it. From this Erasmus experience, we will surely come out more responsible and mature about the planet we are living in.

# THE MOST INTERESTING POINT

- The point that struck us the most was the one about the circular economy for the electronic marketplace. Hence, in our report we will go into more detail on this topic. Some of the big names in electronics industry have officially committed to the circular economy. With the **Circular Electronics Partnership (CEP)**, for the first time ever private companies will be working on this issue side by side with international organizations. Lowering the environmental impact, trying to eliminate basic issues is essential in our times, improving our world and trying to leave it better than we have found it.

# WHAT SHOULD BE BETTER

- **There are several things that we can improve, but one of them is definitely to reduce solid waste of electronic items, which has been increasingly growing since 2020. Most of this waste cannot be recycled and, consequently, it is not good for our planet, as it contaminates water and soil. All in all, our health is in danger as well. We believe it is important to reduce this waste to protect future generations who will have this planet on their shoulders. It is important that each of us works as an ally by reusing and recycling.**
